

# Schematic of Drought Hazard Analysis Pipeline

<sup>1</sup> Location: pic/projects/GCAM/isimip\_inputs\_2b/monthly

<sup>2</sup> Location: fldgen\_io/output/fldgen\_gcm.rds

<sup>3</sup> fldgen generates emulator relationships for each GCM/grid cell using annual GCM data; an2month derives the dirichlet distribution (alpha) parameters required for annual-to-monthly disaggregation for each grid cell/GCM, which are used to disaggregate annual stochastic fldgen output before being fed into each monthly time-step xanthos simulation.
